

Hello VTF HR,

As a rising freshman (class of 2025) who is planning on majoring in computer engineering, I am applying for an internship position in the Information Technology area, but I'm also interested in accounting.

I have a strong interest in data analytics and finance. I wish to learn more about the role of computing in investments and debt management as well gain a deeper understanding of how massive foundations like VTF oversee and manipulate financial assets. I'm passionate about computing and I can work and learn independently.

I would like to get any type of assignments related to the investment oversight of the foundation's endowment and life income programs or the accounting of short-term and operating investment funds. However, I'm very open-minded and eager to get any type of experience.

I look forward to speaking with you in further detail about the internship and opportunity.
Sincerely, Rakesh Pillai
